What data is available via the API?

We've launched an API to allow our customers to manipulate, slice and dice the Carbon Credit Analytics data to get the most value out of it. The Carbon Credit Analytics API will have 6 GET endpoints to retrieve data. Each endpoint will provide different datasets users will be able to merge.

The Carbon Credit Analytics API will have 6 GET endpoints to retrieve data. Each endpoint will provide different datasets users will be able to merge.

1. **GET /retirements:** Returns a paginated/sortable and filterable list of retirements including information on retirement year, volume of retired credits, data source, registry, and data qualifier. Optionally, related projects, companies, and industry data can be included in the request.
2. **GET /retirement/:id:** Returns information about an individual retirement including retirement year, volume of retired credits, data source, registry and data qualifier. Optionally, the related project, company and industry data can be included in the request.
3. **GET /companies:** Returns a paginated/sortable and filterable list of companies for which we hold retirement data. Optionally, related industry data can be included in the request.
4. **GET /companies/:id:** Returns the name of a company for which we hold retirement data. Optionally, related industry data can be included in the request.
5. **GET /industries:** Returns a paginated/sortable and filterable list of industry names for which we hold retirement data.
6. **GET /industries/:id:** Returns the name of an industry for which we hold retirement data.

About the API

- Please contact info@sylvera.io to access our API documentation.
- **Authentication & Access:** We use API Keys to authenticate on the API.
- **What's an API key?** An API key is a unique identifier used to authenticate and authorize a user, developer, or calling program to an API.
- **Carbon Credit Analytics** users wishing to employ the API can create and manage their organizations' API keys via our web platform.
- The API is based on the **JSON API specification**. There are a [number of libraries in various languages](#) that you can use to interact with it or you can do so directly as a REST API.
- For more information about the API, see the API documentation linked above.
