Jurisdictional Intel

The Jurisdictional Intel product suite supports new and experienced market participants in understanding and navigating the complex Jurisdictional REDD+ (JREDD+) landscape to leverage the opportunities and tackle the risks arising from this soaring project type.

Sylvera's Jurisdictional Intel product suite is composed of four stand-alone products, each of them providing insights and transparency into the **Jurisdictional REDD+ (JREDD+)*** space from a different angle. They can be combined based on your needs so you only pay for what is relevant to you.

To facilitate the understanding of the intricacies of the JREDD+ space and to ensure you are up to date, we also provide:

- Complementary explainers of key concepts
- Case studies
- Jurisdictional expert sessions
- Quarterly updates
- Monthly notifications about the latest major developments

*Jurisdictional REDD+ (JREDD+) programs are REDD+ activities implemented at a national (i.e. whole country) or subnational (e.g. state or province) scale. These activities could include APD, AUD, AUDD, IFM and ARR.

The Jurisdictional Landscape

- Jurisdictional issuances – from emission reduction and removal projects conducted at a national or sub-national level – **present the opportunity for future large-scale issuances which will help develop greater supply of high-quality credits**

- Jurisdictional credits are set to play a key role in international compliance markets **such as CORSIA and Article 6**, making them a valuable credit type for achieving global targets

- Nevertheless, the transition towards jurisdictional programs **can create significant risks to individual projects due to 'nesting'**, which means VCM buyers need to understand, evaluate and monitor portfolio exposure

Unlocking value with JREDD+

The Jurisdictional Intel product suite is a one-stop shop that collects and processes information originating from numerous disperse resources so that Sylvera customers are able to:

- **Stay ahead of market trends and your peers** by leveraging the jurisdictional credit supply opportunity

- **Make informed strategic decisions** based on the most up-to-date JREDD+ intel and future projection

- **Save time and resources** by accessing ready-to-use information

Sylvera

JREDD+ Country Assessment

Outlines countries' REDD+ landscape and assesses the viability of investing in JREDD+ programs based on how prepared a country is to implement JREDD+ programs and the potential risks associated with it. Also, it provides relevant information for those that currently hold individual REDD+ projects in their portfolios and face jurisdictional transition risks (such as ownership risks and rebaselining and nesting). The thirty most active countries in the JREDD+ space are included in the assessment and a comparison among all of them is provided through a scoring system.

Available now

JREDD+ Methodology Comparison

Provides an overview of the current state of the JREDD+ standards (including for example market acceptance and reputation) and methodologies and monitors its evolution. It meticulously breaks down the ART TREES, VCS JNR, FCPF Carbon Fund and REDD.plus methodologies comparing how each of them approaches key aspects that define the quality of a carbon credit (such as additionality, leakage or co-benefits) and highlighting any red flags or loopholes that could be exploited.

Available now

JREDD+ Program Tracker

It aggregates program-level data from the major results-based-payment mechanisms (such as the Green Climate Fund) and all JREDD+ registries (ART TREES, VCS JNR, FCPF Carbon Fund and REDD.plus) so that you have a full view of the supply landscape. The tracker contains historical data and gives regular updates on program progress so you can stay up to speed with the latest developments and upcoming issuances. Also, it assess overlaps among different programs to identify potential double issuance risks and tracks jurisdictions participation in the LEAF Coalition.
